

# AT

## DESCRIPTION

AMC-MECANOCAUCHO® AT mounts are specifically designed to provide isolation for medium to high frequency applications.

The rubber section is fully bonded to two concentric tubular parts. The inner metal is a plain tube design. The outer metal part is also mainly tubular but has a manufacturing process Flanged effect at one end with a variation in the number of attachment holes.

## OPERATION AND ASSEMBLY

The AT type design uses the rubber in a shear mode and to ensure optimum operation and life expectancy it is recommended that a suitable washer design is used at each end to provide a progressive stiffness under load in

compression for the top section and rebound control in the case of overload conditions. When used with top and bottom washers as recommended the installations are "Fail Safe" when bolted to the suspended equipment.

## TECHNICAL CHARACTERISTICS

Type AT mounts have a radial to axial ratio of 4 : 1 , thus providing good horizontal stability.

It is manufactured in three hardnesses to facilitate the choice of the most suitable mount (Soft: hardness A 45, Medium-sized: hardness B 60 and Hard: hardness C 75).

## ADVANTAGES

- Robust design, strong metal parts.
- Easily installed to support structures, 3 hole or 4 hole attachment depending upon size selected.

## APPLICATIONS

The "A.T." elastic mounts can be used to great advantage for the vibration isolation of engines, piston compressors, presses, electric transformers, mobile units, machines, on concrete buttresses, etc.
